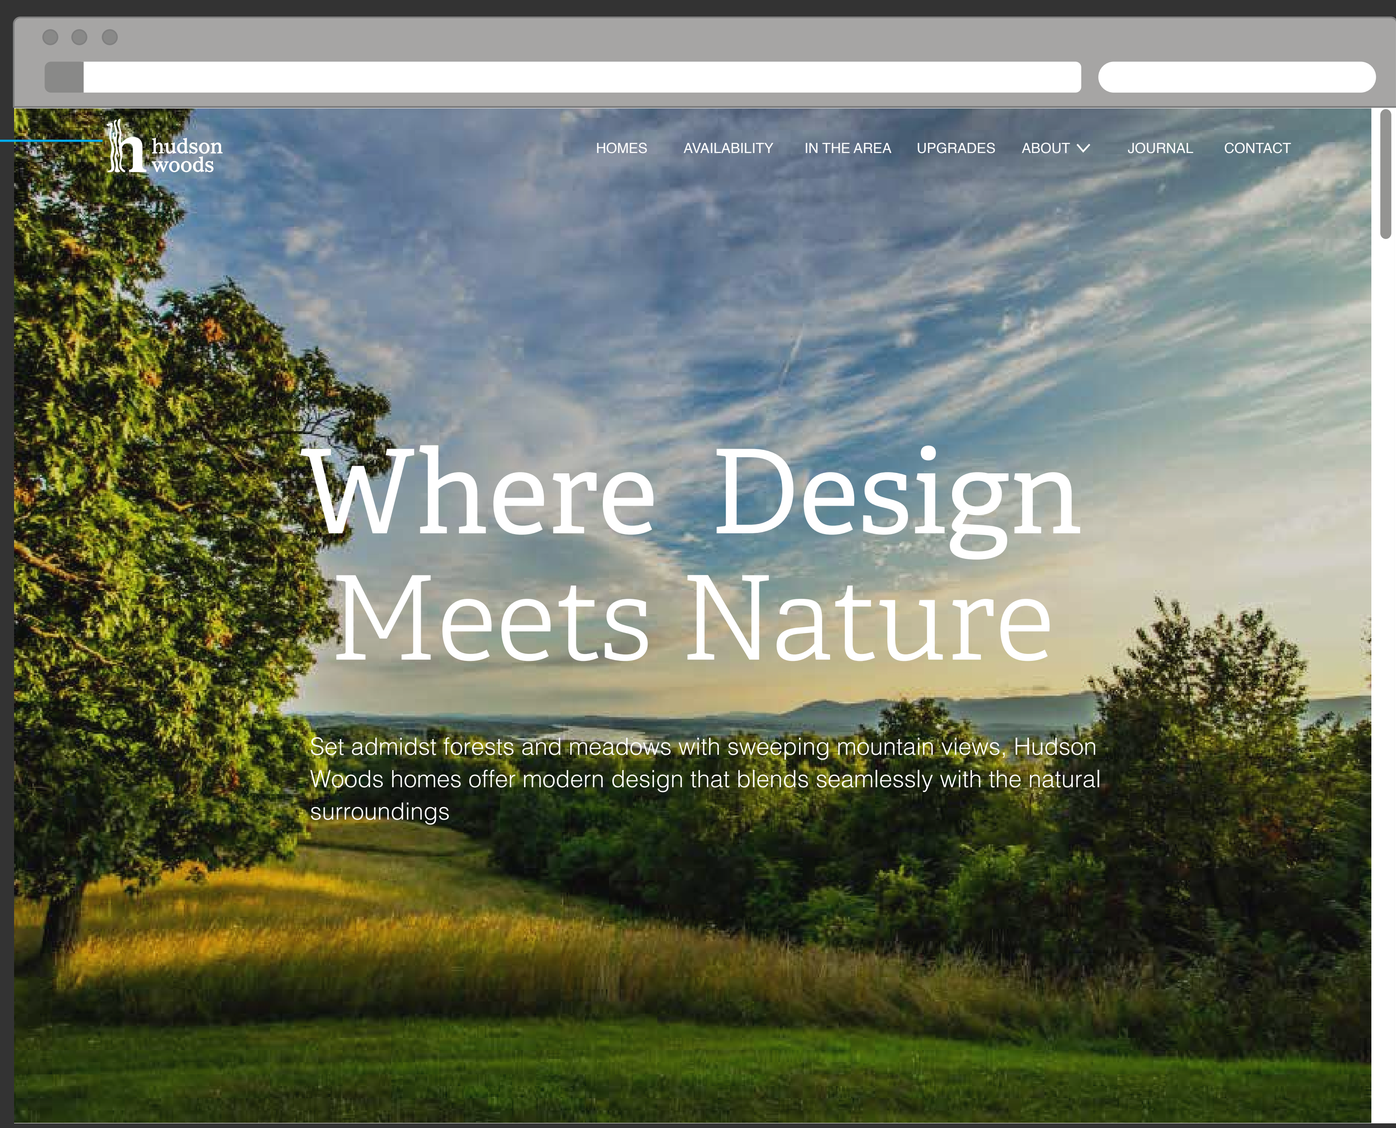
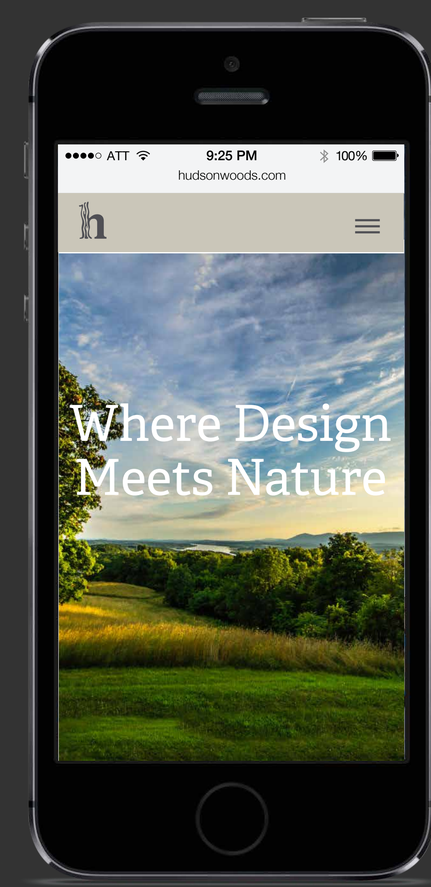
LANDING PAGE

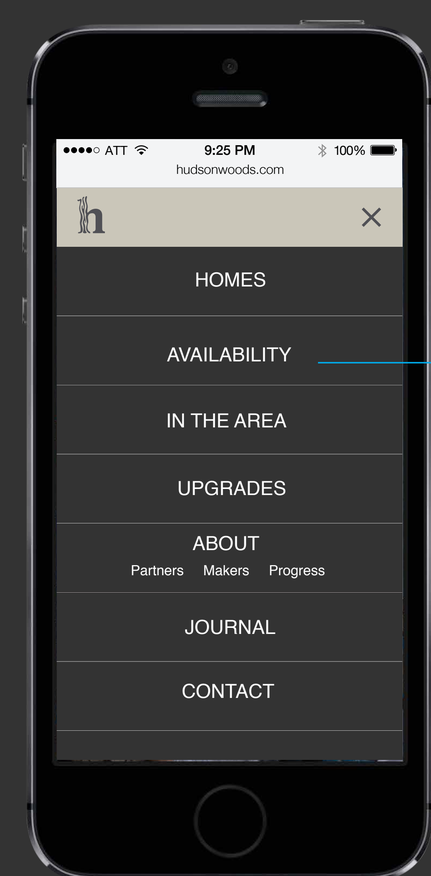
Nav

Content has been changed to reflect last discussion

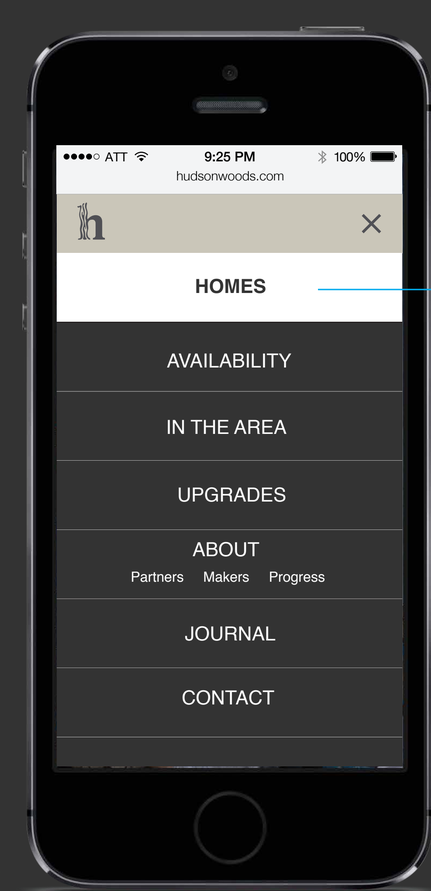
We would do the no bar on every page until the scroll is utilized





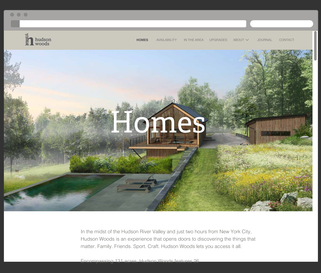


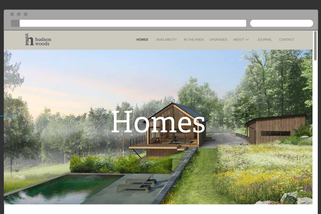
Full screen dropdown when mobile menu is utilized



touching once indicates it is picked, twice indicates it is accessed

HOMES PAGE



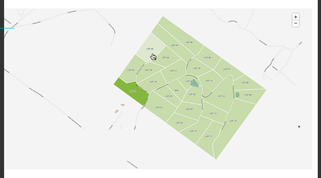


Parralax section image

Idea is to make these glide behind as in exitsing site

In the midst of the Hudson River Valley and just two hours from New York City, Hudson Woods is an experience that opens doors to discovering the things that matter. Family. Friends. Sport. Craft. Hudson Woods lets you access it all.

Encompassing 131 acres, Hudson Woods features 26 architect-designed dwellings meticulously crafted from locally-sourced, sustainable materials.



LOT Map

Will be same as availability section with same interactivity. See next page. We may be able to streamline these pages?

Base House Floor Plans
Designed for contemporay Living

Floorplans

See other configurations/styles in Homes exploration document.

2,800 SQFT

3 BEDROOMS

2 BATHS

GARAGE/ STUDIO + CARPORT

A La Carte Services
Property maintenance and more

A La Carte

Could have a number of images scrolling through to suggest services– Beehive, Landscaping etc.

Could do icons for all but might seem excessive?

House and Property

Maintenance

House Rental

Gardening and Landscaping

Beekeeping

Food Shopping/ Chef Services

Transportation

Personal Assistant Services

Pet Care

Personal Training

Sport and Outdoor Guide

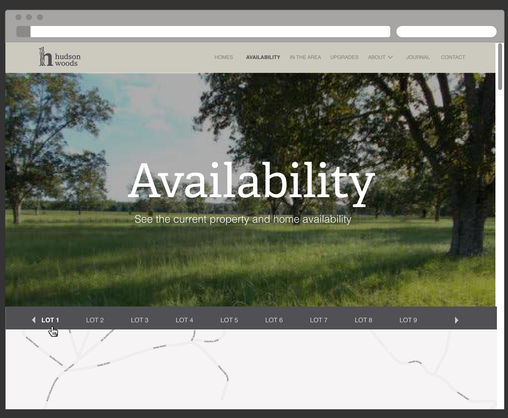
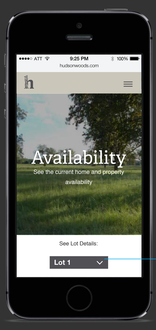
AVAILABILITY PAGE

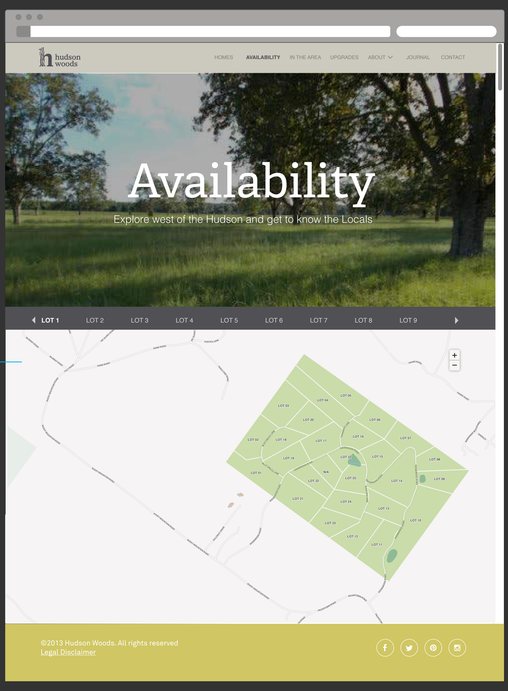




Use drop down button that should trigger mobile scroll

Availability Landing image

Need to find an image that is relevant. We could remove it but will look odd compared to other pages



Plan to remove overall image for mobile and replace with individual images for easy scroll

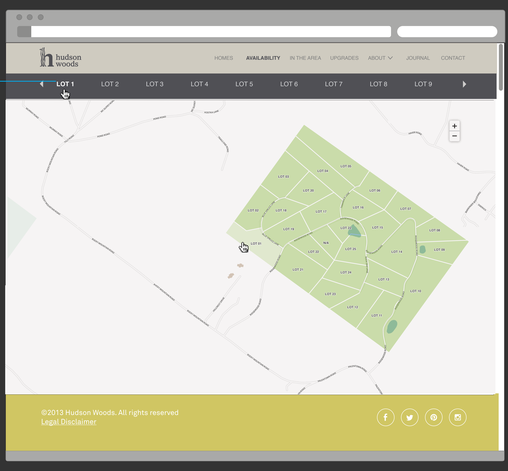
LOT Map

Ideal is to use Mapbox tileserver that utilizes open Street Maps.

Two Modes of navigation to fit with general style on other pages: Top lot names that scroll left to right or the map itself. Hovering over map will light up individual lot area tiles.

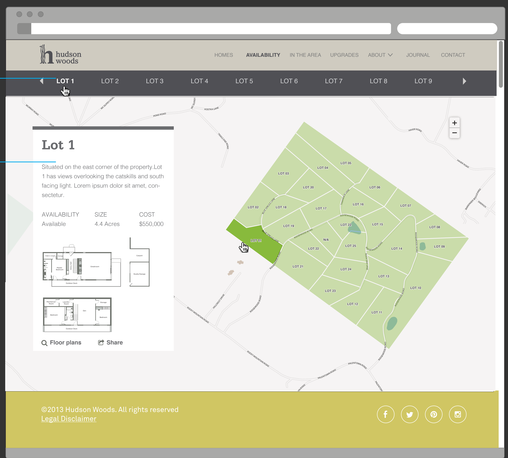
Clicking brings up card with Lot's individual details: See below

Unavailable Lots can have disabled Lot tiles



Filter nav bar

moves up to stick to top nav when used/clicked



Filter nav bar

moves up to stick to top nav when used/clicked

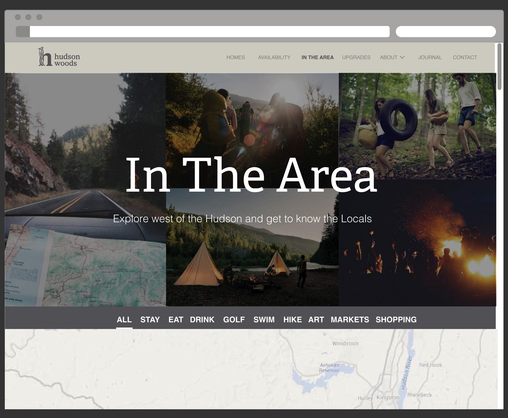
Lot Description

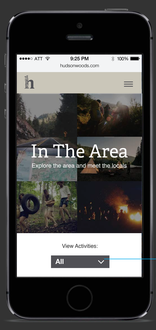
Set style for every lot. Different Lots have different floorplans

May wabt to just have download PDF for larger map view. We will need that for sure.

IMPORTANT
Each lot will need to command a specific URL. To allow for linking and sharing amongst brokers etc.

IN THE AREA PAGE

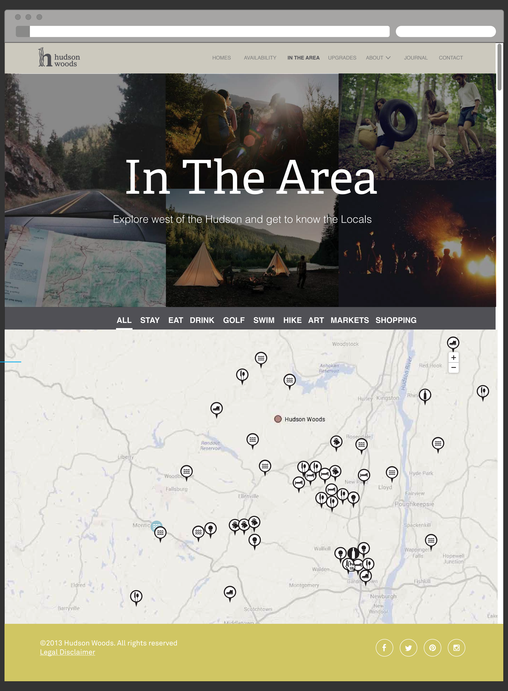




In The Area Landing image

Need to find/Buy new images

Use drop down button that should trigger mobile scroll

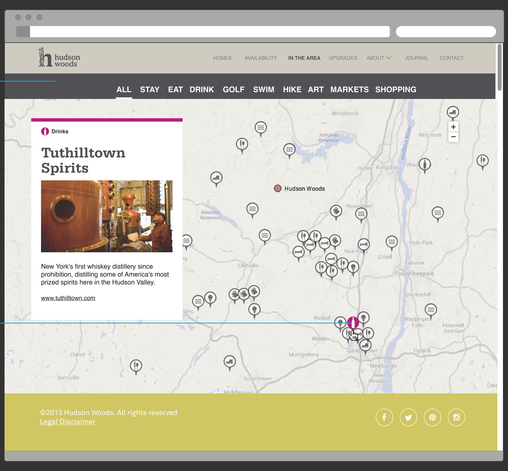


In The Area Map

Ideal is to use Mapbox tileserver that utilizes open Street Maps.

Filters other than all have a color asscoaited with it for filtering navigation and on hover and when icon is clicked

Images or map replace overall map. Need to see final list of content to decide. Could be a lot of work otherwise.

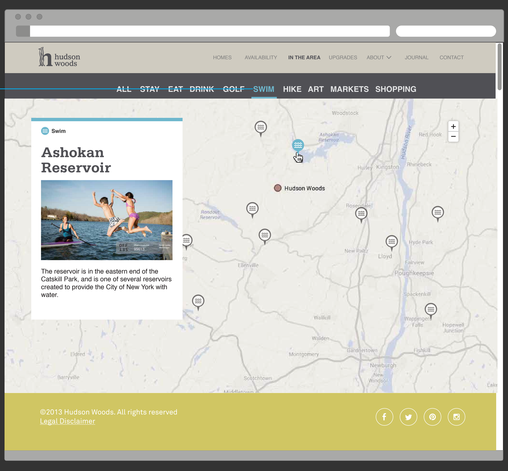


Filter nav bar

moves up to stick to top nav when used/clicked

Clicking icon

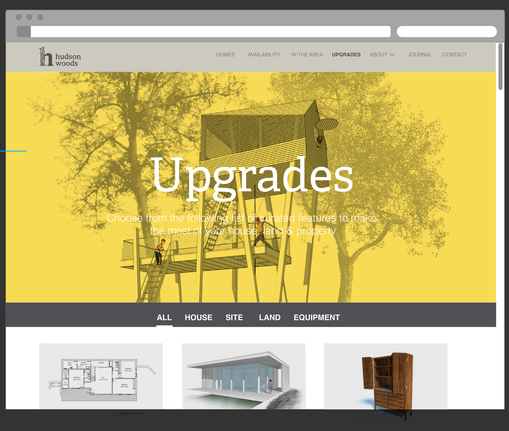
Brings up card with details



Applying filter

Turns other areas off and only shows that category

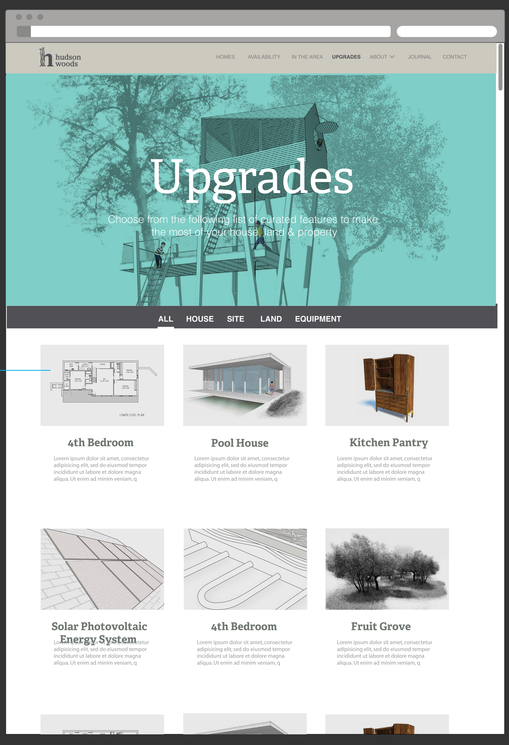
UPGRADES PAGE



Upgrades Landing image

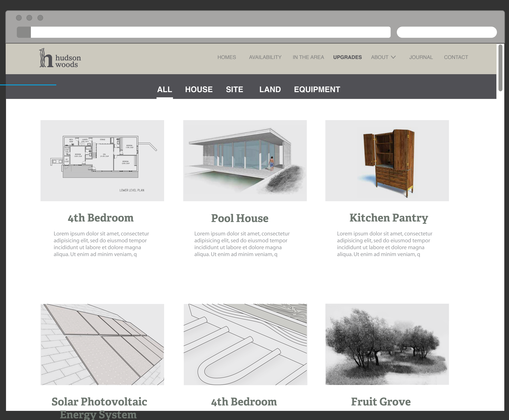
Is there one upgrade image or a few that could rotate that could be used here

Use drop down button that should trigger mobile scroll



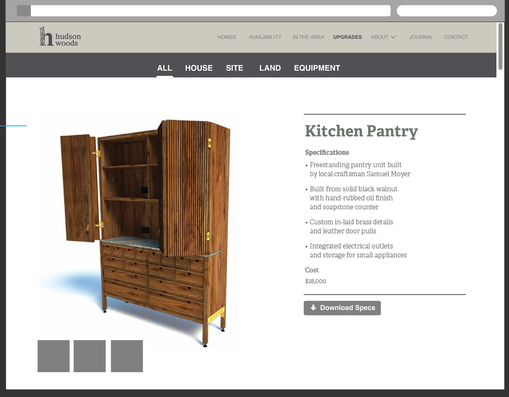
Upgrades items

Need to create hover mode? Clicking will take to detail page as seen below



Filter nav bar

moves up to slick to top nav when used/clicked



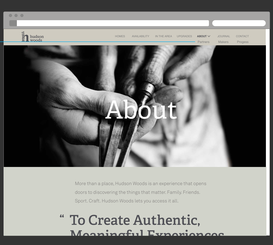
Upgrade Detail page

Probably won't have secondary filters still in play. Need to discuss with development.

ABOUT PAGE

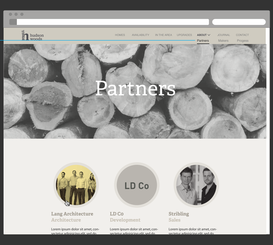
Navigation

To reflect desire to be able to link directly to the areas. A bit messy but can't really think of a more elegant solution unless we make these their own page.



Navigation

Would work like existing site.



Parralax section image

Idea is to make these (pile behind) as in exiting site

Also generate specific sub nav and url
